

Transportation Connectivity and Economic Productivity

Client Facts

Private Period 2022

Project Country United States

EBP staff conducted a study that showed how transportation connectivity affects wages and jobs in different industries in cities, metro areas and across states.

Metropolitan Market Access -- The first part, <u>Measuring the Regional Economic Impact of Transportation Access Improvements in the Context of a Large Metropolitan Region</u>, was published in 2021. It shows how labor market access and business connectivity interact to affect economic productivity and business clusters within a large metro area.

Weisbrod G, Goldberg J, Frank P. Measuring the Regional Economic Impact of Transportation Access Improvements in the Context of a Large Metropolitan Region. Transportation Research Record. March 2021. https://doi.org/10.1177/03611981211002520

Regional Freight + Intermodal Access -- The second part, <u>Relationship of Regional</u>, <u>Freight, and Intermodal Market Access to Industry Location and Productivity</u>, was published in 2022. It shows the economic development implications of wider regional connectivity to supply chains, intermodal terminals and same-day travel markets.
